Adding and Subtracting Game

Workout D

You need:

Adding and Subtracting Game templates (see below for Game 1, Game 2, Game 3 and Game 4)

Card Set A (print off the cards) for each player.

Card Set B (print off the cards) for each player.

To play:

Pick Game Template 1, 2, 3 or 4

Each player shuffles Card Set A and picks cards to create a number.

Each player shuffles Card Set B and picks cards to create a number.

Both players now find the answer to their calculation.

To win:

The player who calculates the highest total wins a point.

The players then rearrange the cards to try and win a second point by calculating the lowest total.

The first player to get 10 points wins the Game.

Game 1

$$\begin{array}{|c|} \hline A \\ \hline \end{array} \begin{array}{|c|} \hline A \\ \hline \end{array} \begin{array}{|c|} \hline A \\ \hline \end{array} \begin{array}{|c|} \hline A \\ \hline \end{array} + \begin{array}{|c|} \hline B \\ \hline \end{array} \begin{array}{|c|} \hline B \\ \hline \end{array} \begin{array}{|c|} \hline B \\ \hline \end{array}$$

Game 2

$$\begin{array}{|c|} \hline A \\ \hline \end{array} \begin{array}{|c|} \hline A \\ \hline \end{array} \begin{array}{|c|} \hline A \\ \hline \end{array} \begin{array}{|c|} \hline A \\ \hline \end{array} - \begin{array}{|c|} \hline B \\ \hline \end{array} \begin{array}{|c|} \hline B \\ \hline \end{array} \begin{array}{|c|} \hline B \\ \hline \end{array}$$

Game 3

$$\begin{array}{|c|} \hline A \\ \hline \end{array} \begin{array}{|c|} \hline A \\ \hline \end{array} \begin{array}{|c|} \hline A \\ \hline \end{array} \begin{array}{|c|} \hline A \\ \hline \end{array} + \begin{array}{|c|} \hline B \\ \hline \end{array} \begin{array}{|c|} \hline B \\ \hline \end{array} \begin{array}{|c|} \hline B \\ \hline \end{array} \begin{array}{|c|} \hline B \\ \hline \end{array}$$

Game 4

Set B

Add and Subtract Workout

Workout E

Put digits in the empty boxes to make the calculations correct.

Complete them in several different ways, where possible.

Possible Solution

$$\boxed{2} \ 6 \ 5 \ 4 \ + \ \boxed{3} \ 9 \ \boxed{9} \ \boxed{8} \ = \ 6 \ \boxed{6} \ 5 \ 2$$

$$6 \ \boxed{7} \ 5 \ 0 \ - \ \boxed{1} \ 8 \ 0 \ \boxed{0} \ = \ \boxed{4} \ 9 \ \boxed{5} \ 0$$

Are there any boxes that it is impossible to put a digit in? Why?

Are there any boxes that could have any of the digits in them?

Now complete it using the digits 0, 1, 2, 3, 4, 5, 6, 7, 8 and 9 once each.

Times Tables Array Investigation

Workout F

Use arrays to complete the grid such that each array contains exactly one number, and that number represents the area of the array.

One array has been completed for 9 (3×3).
